Cool ICE Data Wizard
Developer Specifies
Databases, Tables
(Up to 5), Fields and
Field Order (Up to
50), and a Where
Clause
512
Cool ICE Creates a Web
Service that will retrieve
the tables and perform the
join and perform any
further manipulation as
specified by theCool ICE
Data Wizaard Developer.
This service will optionally
render a data set to an
ASP, a graph in an HTML
page to a web browser, or
a table in an HTML page
to a web browser.

516
Select up to five source tables.
518
Check Profile and Display Table(s).
520
Select up to 50 columns from the selected tables. The order in which the columns are selected determines the order in which they appear in the resulting table.
522
Refine Join Definition with a Where Clause. Column values may be compared to literals values, variables input from the end user, or to other columns in order to define the Where Clause.

APPNAME -- Subkey matching the name of the application

565

- ENABLETRACE -- DWORD value indication a Boolean (1=trace., 0=no trace).
- MAXENTRIES -- DWORD value indicating the maximum number of entries in the trace file. If missing. then no upper limit is imposed.
- FORMATFLAGS -- DWORD value indicating message formatting flags.
- POLICYFLAGS -- DWORD value indicating trace policy flags set for the application.
- TRACELEVEL -- DWORD value indicating a trace level. 0 = no trace.
- TRACEPATH -- String value indicating the directory path for the trace files.
- REGTRACE -- A string value containing the HKLM\Software sub key to trace for this application. Blank or missing for no registry trace.
- COMPONENT -- A subkey for a specific component of the application.
  - POLICYFLAGS -- Value indicating component level trace policy flags
  - TRACELEVEL -- DWORD Value indicating a trace level. 0 = no trace.
  - VERSIONTRACE-- String value specifying executable component name for version information tracing.

User posts a transaction from a browser disply to an Active Server Page on an NT CoolICE server
822
824
826
ASP Module
• Calls WebParse DLL module.
• Calls CoolICE object to process the parsed result.
• Returns dynamic HTML to user from CoolICE.
WebParse Module
• Reads web page form content.
• Parses and formats content into a field name/field value pair result.
• Returns result to ASP.
828
User receives transaction from the CoolICE server.
